Typed 1.0.0 Download

The source for this interactive example is stored in a GitHub repository. If you'd like to contribute to the interactive examples project, please clone and send us a pull request. Syntax: `new TypedArray(length);` `new TypedArray(typedArray);` `new TypedArray(object);` `new TypedArray(buffer , byteOffset , length);` where TypedArray is one of: `Int8Array`; `Uint8Array`; `Uint8ClampedArray`; `Int16Array`; `Uint16Array`; `Int32Array`; `Uint32Array`; `Float32Array`; `Float64Array`; `BigInt64Array`; `BigUint64Array`; `Parameters` length. When called with a length argument, an internal array buffer is created in memory, of size length multiplied by BYTESPERELEMENT bytes, containing zeros. TypedArray. When called with a typedArray argument, which can be an object of any of the typed array types (such as `Int32Array`), the typedArray gets copied into a new typed array. Each value in typedArray is converted to the corresponding type of the constructor before being copied into the new array.
